Tunnel connects between Sudirman Commuter Line Station, BNI City Airport Train Station and Dukuh Atas MRT Station; was formally a vehicle transit road with high dense of vehicle

Jakarta as the capital city of Indonesia, try bringing the development of innovation and technology to front, transportation and infrastructure are Two of issues what the government focused on nowadays.

Dukuh Atas TOD is located in Central Jakarta. This Transit Oriented Development project is first inaugurated in April 2019 and planned to be finished at the end of December 2021. In the future, this area will be equipped with various mass transportation such as Bus Rapid Transit (BRT), MRT, Light Rapid Transit (LRT), and a pedestrian / bicycle network as well. It is expected to be an interconnected area between diverse transportation modes and pedestrian friendly environment.

This area is currently a well-known transit area with three major nodes including Sudirman Station (Greater Jakarta Train Network), TransJakarta’s Dukuh Atas 2 stop, and BNI City Station (Airport Train Network). Jakarta MRT is inaugurated and opened for public on March 2019, making this area is the perfect example for TOD development.
